Colorfind by ASARA, Software Design Projects
A full-stack serverless mobile application providing precision color identification and comparison.

- Architected a unified cross-platform codebase for IOS and Android using React Native and TypeScript.
- Structured a secure cloud-native backend using AWS Amplify, Cognito, DynamoDB, and Amazon S3.
- Developed engines for color conversions (sRGB -> CIELAB) and comparisons (with CIE2000 DeltaE).
- Reduced latency and computing costs by implementing client-side image compression and async uploads.

Pizza-API, Software Engineering
An API that allows for menu management, taking and paying for orders, automatic database setup, and more.

- Designed and developed an API using FastAPI (Python) with a MySQL database.
- Engineered a modular architecture with clear separation of routers, controllers, schemas, and models.
- Created CRUD operations for core entities with validation, error handling, and SQLAlchemy integration.
- Worked with a team utilizing an Agile workflow and sprints to create a product with documentation.
